(54) Title: EMISSION DEVICE INTENDED TO BE COUPLED WITH A RECEPTION DEVICE

(57) Abstract: The invention proposes a radio wave emission block 102 intended to modify a satellite-based reception installation into a cheaper emission/reception installation. The emission block 102 comprises a first input/output terminal 150 and a second input/output terminal 152 electrically linked to the first input/output terminal 150 by way of a band rejection filter 153 which rejects the intermediate emission frequency band. The invention also pertains to a transmission device comprising a reception block 101 coupled with the emission block 102.
